Intelligence on Munitions  
[www.fenix-insight.online](http://www.fenix-insight.online)

UPDATE:  
SEPTEMBER  
2018

## MONTHLY STATISTICS

2698 MUNITIONS

12833 IMAGES

878 DOCUMENTS

325 ORGANISATIONS

55 CONFLICTS

352 EVENTS

241 EXPLOSIVE FILLINGS

**1,145 UPDATED RECORDS**

## Updates to the Fenix Online Database

The Fenix Online team have once again worked industriously throughout September. A native Russian speaker has joined the team to give to further improvements to the Cyrillic capabilities of the database; with much more Russian translation coming soon!

Over 50 munitions, 50 technical documents and 100 images have been added to the database in the last month. These include never-seen before Bulgarian and Russian projectiles, Chinese mines, Yugoslav fuzes, and much more; all added with their respective technical documents, detailed specifications and objective characteristics.

The team is constantly researching and improving our understanding of manufacturer information and factory details. This includes analysing photographs and in-houses stocks of hardware for factory numbers, lot numbers and years of manufacture. The findings from this research are added to Fenix Online on a daily basis.

### WORKING SMARTER, NOT HARDER.

Fenix Online takes the difficulty from intelligent munition search. As well as related items, munitions are linked through countries of origin, conflicts and regions used in, fillings, and manufacturers. Browse through the database to find the links between munitions you may not expect.

### BOTSWANA SUCCESS!

The team has returned from a successful deployment to Botswana during September. The team was working alongside Norwegian People's Aid and the Botswana Defense Force to aid the Botswanan Government in achieving their commitment to the Convention on Cluster Munitions. As of 20th September 2018, Botswana is in compliance with the treaty! Expect new and up to date photographs, characteristics and specifications for Russian and US cluster and submunitions coming to Fenix Online throughout October.

### FEATURED MUNITION:

PTM-1

The PTM-1 is a scatterable AT blast mine. The mine uses the MVDM fuze, which incorporates a clockwork SD (self-destruct) mechanism and a pyrotechnic element found at one end of the assembly.

Using the intelligent 'Related Items', it is simple to view details of the fuze of this mine, as well as other associated anti-personnel landmines.
